DDS&T-2312-72

MEMORANDUM FOR: Chairman, Security Panel

SUBJECT: Guidance for Further Panel Action

1. In order to support a comprehensive Committee report to the R&D Board in December, the Technical Coordinating Committee requests that you update your panel report to follow the outline given in my memo to the TCC members of 26 May 1972 and to include the additional information and topics noted below. The Committee would like to have your revised report by 20 October.

2. In general, the Committee would like you to continue your efforts to explicitly define the content and adequacy of the current Agency program and the additional work that should be done to support the Agency interests in this area. Where capabilities are inadequate, please describe the technical (or operational) reasons for these inadequacies. In addition, we would like you to place special emphasis on the definition of areas in which you and the offices represented on your Panel believe new initiatives should be made. We would like these proposals defined in detail, with estimated costs for FY 73 and FY 74. For 73, please give us a description of the specific tasks that should be performed and the contractors suggested as having the capability to undertake or propose on these tasks. In essence, we would like to use your next report as a basis to recommend to the R&D Board the specific new programs (i.e., programs not currently included in Agency program plans) that could and should be undertaken in the last half of FY 73 and those that should be planned for FY 74.

3. Please feel free to call on me if you have questions or need assistance.
